Häkelthon: Crochet Sammlung digital

ZHAW Hochschulbibliothek
Roger Zollinger

The goal is an application which

- searches Sammlung digital for objects using the provided search terms
- lets the user choose one object from the results
- generates instructions how to crochet the object

Optional features

- automatic filtering of the results for objects which can be realized with the crochet technique
- searching a second GLAM-collection (e. g. ZHAW digitalcollection, Switch OER or Swisscovery) with the same search term(s)

Optional features taken from another challenge

- presentation of the results from the primary platform enriched with one random scientific fact
- showing the user which collections were used
