Shared Data for Net Zero

enabling data ecosystems

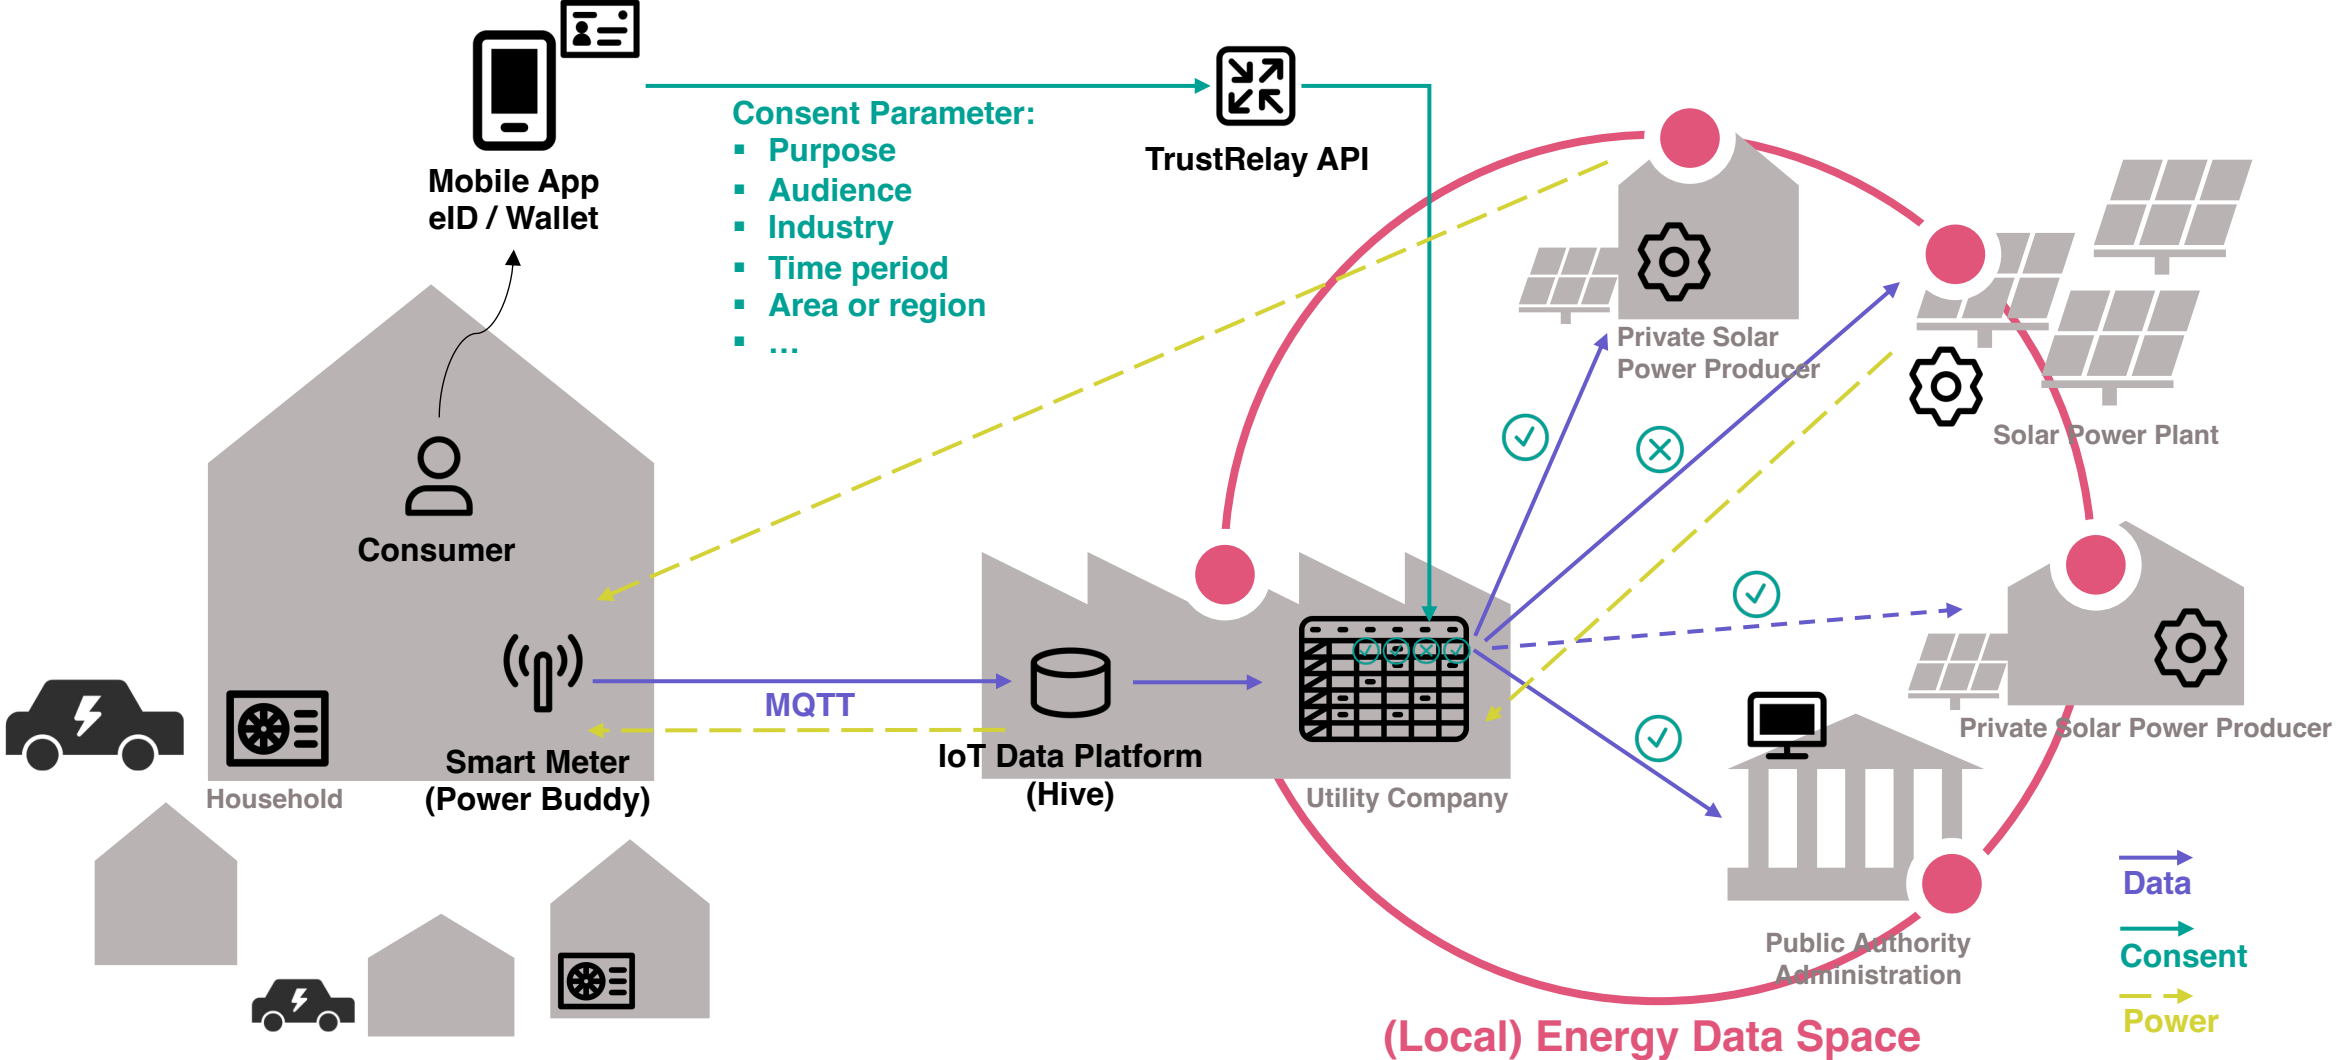

The most optimal way to use renewable energy is to use it in the immediate neighborhood and at the time of production!

Access to detailed data is missing!

Without the permission of private individuals there is no access to detailed data about their energy consumption, heating behaviors, e-car charging patterns, ...

Our goal is to setup a consent management process which allows private individuals to give specific consent to use their data for a particular purpose.

Solution Approach

If we can do this for Berne, then it will also work in other cantons.

If we can implement consent management for energy data spaces, then we can increase the complexity and deal with mobility data and at some point even health data...
