

# Transparency by OGD and BOR

Illegal financial flows are a major global problem and in some cases the direct cause of poverty and environmental destruction. The Beneficial Ownership Register BOR with its transparent disclosure of ownership structures in companies is one of numerous measures to uncover these.

A BOR already exists in many countries and is currently being set up in Switzerland. This is the unique opportunity to contribute your expertise and motivation to its development!

With the help of the Openownership Register, Data Standard and Open Government Data, we want to find the most effective analyses and create meaningful visualisations this weekend.
